## News & Announcements

### Site Work in Full Swing

After a slow start this past winter, work on the Veterans Parkway project site is now progressing rapidly. Crews are actively working on all three of the project's bridges, and earth-moving and drainage installations are occurring project-wide.

Most of the work to date has been taking place off of the existing roadways. As utility relocations are completed in the near future, our work will start to have a more direct impact on the traffic on West Union, US 51, Navy Road, and Raleigh-Millington Road. We'll do our best to keep everyone up to date on upcoming lane closures and restrictions. As always, the project website is the best place for up to date project information.

### Project Schedule

The most common question we get is "when will this thing be finished?" The project has a scheduled completion date of November 15, 2012. All project work is currently on-schedule to meet this deadline.

### Site Access

We'd like to remind everyone that all portions of the Veterans Parkway construction project are off limits to the general public.

As construction activities continue to increase all over our project site, it is critical for your safety and for the safety of our workers that anyone who is not directly working on this project stay off the site. We appreciate your cooperation!

## Project Facts

There are three bridges on our project, totaling 1,300 feet in length. To build these structures, we'll use 1,620,000 pounds of reinforcing steel, or 810 tons. That's over 3 times the weight of steel and copper in the Statue of Liberty!
